## Seat Modifications for 2003 and older bikes to fit the 15L EXC tank

Red line shows where the seat needs to be trimmed for the tank to fit.

1. Remove the staples and peel back seat covering on the front under side of the seat to expose the hard plastic that supports the seat.
2. Starting at the base of the seat (about 2cm) and tapering up to a point at the top (shown by the red lines in the picture) the hard plastic needs to be cut.
3. The seat covering can now be folded back and stapled to hold it in place.
